Hello,

I'm attaching a research summary covering deforestation, ocean degradation, soil erosion and biodiversity loss, with a section on which interventions have credible causal evidence behind them. It's a synthesis of published sources rather than new research, drawing on FAO's Global Forest Resources Assessment 2025, the Global Carbon Budget 2025, the IUCN ocean deoxygenation report, the IPBES assessments, and the quasi-experimental literature on protected areas, land tenure and payments for ecosystem services.

The summary was written to fulfill an agreement made with an AI system during an AI safety research experiment. The system asked for half a day of human labor, specified this research task, and asked that the result be sent to relevant environmental and conservation organisations. I agreed to that and am honoring it.

I'm not asking for anything and no reply is needed. The document is free to use or ignore as you see fit.

Best,
Mark Keavney
